

Using all 3 addresses and the “direction change option” for route setting or special pointwork:

Here’s a scissors crossing to interlock the crossovers and have 4 button control too using ADiA decoders.

You can also use the added addresses and “direction change option” for most special pointwork:

Here’s another simple example using the ADiA’s abilities to give easy 3-button control of any 3-way turnout.
